**Restriction Requirement**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, 10, 13, drawn to proteome analysis method, classified in class 702, subclass 19.
- II. Claim 5, drawn to immobilizing support, classified in class 436, subclass 548.8.
- III. Claims 6-8,14, drawn to device and system, classified in 436, subclass 548.
- IV. Claim 9, drawn to plate for mass spectrometry, classified in class 436, subclass 174.
- V. Claim 11, drawn to method for constructing database, classified in class 702, subclass 19.
- VI. Claim 12, drawn to, classified in class 707.
- VII. Claim 15 , drawn to peptide library, classified in class 530, subclass 350.

The inventions are distinct, each from the other because of the following reasons:

Inventions II-IV are unrelated. The products of Groups II-IV possess distinctly different structure, and/or physico-chemical properties, and/or capable of separate manufacture and/or use.

Products of Groups II-IV and method of Group I are related as products and process of use. The inventions can be shown to be distinct if either or both of the

following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different processes such as other analytical methods not requiring proteome analysis.

Methods of Groups I and V are related as independent and/or patentably distinct methods as constructing database by method of Group V can utilize information about protein expression obtained by other methods.

Database of Group VI and method of Group V are related as process of making and product made. The database of Group VI can be compiled by results obtained from analytical methods other than method of Group V.

Peptide library of Group VII is unrelated to inventions of Groups I-VI.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
